Comprehensive Wayfinding System for Central County BART Stations (cont.)

Need/Purpose

The project develops a more efficient and real-time information system that links transit with pedestrian/bicycle/auto destinations based on users needs for safety and reliability. It will implement a wayfinding system that encompasses station interior; station area, including parking garages; surrounding City streets and freeways.

The purpose of the project includes improving orientation, wayfinding and ease of station use for customers traveling to, from and through the facilities; facilitating connections with the other transit, bicycle and pedestrian facilities; and encouraging new ridership by making services accessible and convenient.

Project Location

Possible Segmentation

Improvements can be phase by station.

Issues

None

Current Status

BART has prepared prototype designs and signage standards for real time transit information, kiosks and directional signage within the station area.
